	<p>Show the field ONLY if: [cohort] = '2'</p> <p>The purpose of the study is to help us learn about how cognition may change when individuals stop using marijuana. This study will help us understand how (or if) marijuana influences one's thinking abilities.</p> <p>There are a few important things for you to know about participating in this study.</p> <p>First, this study consists of eight visits at MGH over the course of approximately 45 days. You can earn anywhere from \$220 up to \$420 for participation. In the first week of the study, we will ask you to come to MGH four times. The first visit will last approximately 2 hours, the second visit will last anywhere from 30 minutes to an hour, and the third visit will only be about 15 minutes. After the first week in the study, we will only ask you to come to MGH once per week for the remainder of the month and then one more time approximately two weeks later. All of these visits should take approximately 45 minutes to a little over an hour. During all of your visits, you will participate in</p>								

interviews, fill out questionnaires and play some games on the computer. You will also be asked to take a urine drug test.

Do you think you can commit to coming to eight visits in approximately 45 days, including four visits in the first week of the study?

The other very important thing for you to know has to do with your marijuana use while part of this study. Before the first study visit, we will NOT ask you to make any changes to your marijuana use habits. However, at the first visit, you will be randomized to one of two groups. One group will not be asked to change their marijuana use habits in anyway. The other group will be asked to STOP using marijuana completely for one month. If you are in that group, after a month of not smoking, it will be completely up to you whether you would like to resume using marijuana. It will be very important that you do not use marijuana for at least the first month of the study because we are examining whether cognition changes with abstinence. We will be conducting drug tests at every visit to confirm whether or not you have truly remained abstinent. Are you willing to be randomized to either of these two groups, understanding that you MAY be asked to stop using entirely for one month if you are randomized to that group?

After your first visit, are you

		<p>willing to commit to not using marijuana for 30 days?</p> <p>Your participation in this study is voluntary. During your fist visit, a member of the study staff will review a consent form for the study with you. If you agree to participate, we will ask for your signature on the consent form before beginning the study procedures.</p> <p>Do you have any questions about what I have discussed so far?</p>

83	school_text_2 Show the field ONLY if: [cohort] = '1'	Ok, now that I asked you these questions, I would like to tell you a bit about the study. The purpose of the study is to help us learn about how cognition may change when individuals stop using marijuana. This study will help us understand of how (or if) marijuana influences one's thinking abilities. There are a few important things for you to know about participating in this study. First, this study consists of eight visits at [insert school here].over	descriptive														

the course of approximately 45 days. You can earn anywhere from \$220 up to \$420 for participation. In the first week of the study, we will meet with you at [insert school here] three times. The first visit will last approximately 2 hours, and the second and third visits will last anywhere from 15 minutes to an hour. After the first week in the study, we will only ask you to meet with us at [insert school here] once per week for the remainder of the month and then one more time approximately two weeks later. All of these visits should take approximately 45 minutes to a little over an hour. During all of your visits, you will participate in interviews, fill out questionnaires and play some games on the computer. You will also be asked to take a urine drug test. Do you think you can commit to coming to eight visits in approximately 45 days, including four visits in the first week of the study?

[For marijuana users]: The other very important thing for you to know has to do with your marijuana use while part of this study. Before the first study visit, we will NOT ask you to make any changes to your marijuana use habits. However, at the first visit, you will be randomized to one of two groups. One group will not be asked to change their marijuana use habits in anyway. The other group will be asked to STOP using marijuana completely for one month. If you are in that group, after a month of not smoking, it will be completely up to you whether you would like to resume using marijuana. It will be very

		<p>important that you do not use marijuana for at least the first month of the study because we are examining whether cognition changes with abstinence. We will be conducting drug tests at every visit to confirm whether or not you have truly remained abstinent. If you use marijuana, are you willing to be randomized to either of these two groups, understanding that you MAY be asked to stop using entirely for one month if you are randomized to that group?</p> <p>After your first visit, are you willing to commit to not using marijuana for 30 days?</p> <p>Your participation in this study is voluntary. During your fist visit, a member of the study staff will review a consent form for the study with you. If you agree to participate, we will ask for your signature on the consent form before beginning the study procedures.</p> <p>Do you have any questions about what I have discussed so far?</p>
